Anniversary Celebration of Tider Glass

On May 18th, Tider Glass Group celebrated her 12th Anniversary, managers from our three plants held a day long meeting and ended the day dinner together, Directors from our Temper Glass factory, Mirror lines and Art Glass plant set up great targets for the year and showed great confidence in fulfilling them.

In response to the recent policy of COVID-19, we didn't hold a company wide celebration by travelling like before. Instead, we donated part of the fund to a local NGO via Red Cross supporting their work in emergency rescue.

What's going on in the Chinese glass industry

Due to scattered reports of COVID-19 arise continuously around the country since Feb. 2022, Chinese overall industry situation was inefficient, especially when Shanghai was temporary lock down. The logistics service from North and West parts of China was seriously affected since strict testing methods were taken against truck drivers, and ports of Shenzhen and Shanghai, the most important ports in China, were somehow locked too for some time. Luckily, for export, we still have Xiamen and Qingdao ports functioned normally most of the time. And with the situation becomes stable, we will welcome the peak season for construction industry, which may bring another round of glass price increasing.

What's Happening at Tider Glass factories:

To enforce our ambition of being the leading glass artist, especially in the fields of glass printing and grooving, we installed two more Hua Di Brand Notch Groove Machine this year. Up to now, we have all together two Dip Techs for high end printings and six groove machines for varied design glass panels. We can work on glass with thickness 1/8" up and the notch we groove, no matter V-type or U-type, are perfectly consistent in depth and width. No matter how complicated the design may be, we can just work out more than you expect, lines clear, shape excellent, joint exactly, it just presents you a wondering overall looking!

★ *Staff of the Month*

Mr. Zhan, director of Tider Art Glass factory, is known as Glass Picasso in our region. When he was still a student he showed his talent in paintings and won varied awards. He could be a teacher to follow his father's path in his hometown, but he chose to be a worker in the glass factory in the city! He was one of the earliest man who put the traditional Chinese painting factors into glass work and Tider had the honor to enlist him as director of our Art Glass factory in 2015.

Mr. Zhan

A Small Tip

With the growing demand for glass products from China and container shortages, congestion at certain ports, the overall lead time is becoming longer than normal. Furthermore, the optimistic expectation of Sino-US trade negotiation in the near future may lead to another booming of orders for China fabricators. Therefore, earlier planning of orders and closer communication between the supply chain is becoming more and more important. For regular orders, we are working with our customers to establish stocking program to speed up the delivery so that they can enjoy the advantage of faster delivery during competition.

Scene around Us

About 30 minute drive from our factory, there is a Hot Spring Hotel called "Half Moon Mountain". It is a natural resources, though not so famous as Yellow Stone Natural Park, the natural hot spring measures about 136 Fahrenheit degree, containing rich minerals and trace elements. Families like to go SPA there for the weekend, especially the ladies, as there is story that the spring can make women more beautiful and charming.

Famous Confucius Saying

In Chinese Pronunciation: [qīng nuò bì guǎ xìn]

Meaning: If a man make promises too easily, you can expect he will seldom keep them.

English Counterparts: Better deny at once than promise long
